Introduction

Junior Full-Stack Developer based in London with **commercial experience** supporting **live applications**. Strong in **Python, JavaScript, SQL, Docker**, and **production support**, with a track record of **rapid issue resolution** and **effective teamwork**.

Work Experience

- **Junior Web Developer / QA | January 2026 - Present**
 - Investigate, debug, and resolve production issues via ticketing system, consistently meeting SLA targets and improving overall application reliability.
 - Deliver and deploy new features end-to-end based on client requirements, contributing to an average of 3–4 feature releases per sprint.
 - Monitor runtime errors using Sentry across all production environments, identifying and escalating critical issues to reduce mean time.
 - Own and maintain project boards, technical documentation, and ticket triage for a backlog of 50+ active tickets, ensuring clear prioritisation and team alignment.
 - Perform comprehensive QA testing on all new features and bug fixes prior to release, reducing post-release defects by approximately 30%.
-

Projects

- **Family Tree Web Application | May 2025 - December 2025**
Stack: React (frontend), Python/Flask REST API (backend), SQLite
 - Built a full-stack family tree application showcasing 120 members across 8 notable families, driving user engagement through an interactive React graph interface.
 - Designed a relational SQLite database to manage complex family relationships, cutting query times by 80% via a single optimised joined load query.
 - Deployed on a Linux VPS using Nginx as a reverse proxy and Gunicorn as the WSGI server, achieving an 83% improvement in backend response speed.
 - **Global Emissions Visualiser | August 2025 - September 2025**
Stack: Javascript (Node.js & Express.js)
 - Built an emissions dashboard integrating live API data from over 11,000 global sensors and 300 satellites to visualise real-time greenhouse gas emissions.
 - Reduced client-side data load by 66% through server-side preprocessing, enabling faster real-time insights without sacrificing data fidelity.
-

Skills

- **Languages & Frameworks:** Python, JavaScript, Java, React, Node.js, Express, Flask, HTML, CSS.
 - **Databases:** PostgreSQL, SQLite.
 - **Tools:** Git, GitHub, Docker, Nginx, Gunicorn, Postman, VS Code.
 - **Other:** QA testing, debugging, production support, client communication.
-

Education

BSc Computer Science (2:1) | University of Leeds | September 2020 - July 2023

A-Levels | Graveney Sixth Form | September 2016 - July 2018

- **Grades:** French (A), Maths (B), Physics (B), Chemistry (C)
-

Languages & Interests

- Languages: English (Native), French (Fluent)
- Interests: Football, tennis, cooking, music, cinema
